Prologue

Dear customer,

Thank you for choosing Sygic GPS Navigation for Windows Phone.

Sygic GPS Navigation software is a complete navigation system with **realistic 3D maps**, **accurate search** and precise **route computing**.
Sygic GPS Navigation goes beyond professional car navigation, supporting pedestrian navigation and basic level for outdoor activities.

For mobile viewers of this user guide: please press the highlighted button to display the ***Table of Content***

Sygic GPS Navigation is offline navigation software and does **not require online connection** to operate. Online connection is only necessary during initial installation and activation of the software and for installing **maps and updates**. Online connection is also necessary for optional **add-on services** such as **Traffic information** and crowd-sourced **Police trap alerts**.

Your safety and the safety of your passengers is of utmost importance, that is why you should always plan your route before the **beginning of the journey**. Also make sure that you have installed **all maps and updates** while in the comfort of your home or at a place with solid Wi-Fi connection. For longer trips make sure that you have a **compatible charger** to avoid draining the device battery.

System Requirements:
Internet connection
Location services
Microphone
HD720P (720×1280)
WVGA (480×800)
WXGA (768×1280)
100 MB of free storage

In **Navigation Mode** (Pic.1), the software tracks your position for visual reference of the route and map around you. (Please note that it is necessary to have GPS Module enabled on your device during usage).If you want to explore other locations, drag the map with your fingers to switch to **Map Browsing Mode** (Pic.2).

Map management

`Anytime you are able to **download/update/remove** your purchased map packages in **Manage maps > Download maps** menu:

- **Add** a map by selecting the region you wish to add the map from first and then tapping on the country you wish to add (Note: you can cancel a map that is being downloaded by tapping on it while downloading). Select multiple maps at once to queue up the maps while downloading.
- **Remove** a map by tapping on the check box.
- **Update** maps after a map update is available. This option will be available usually after an app update and will be presented the next time you the **Download maps** section.

***Please note** that before creating a route it is necessary to download maps of all countries included on your route .*

Sygic Store

The **Sygic Store** page in Menu > **Sygic Store** is used to purchase the **Premium features**, **add-ons** and **Online-Services**. It also displays **your license status** and **validity of your prepaid subscriptions**, you can restore your previous purchases when transferring your account to another device, or you can check out **other apps by Sygic** available on the Store.

The following features are available **At no cost**:

- Offline Maps
- Free Map Updates
- Route Planning
- Alternative Routes
- 3D Buildings & Landscape
- Multiple Waypoints
- Millions of POI
- Offline Search

These features are available during the **7-day Trial Period** and **Premium** users after the trial period expires:

- **Guaranteed Map Updates**
- **Lifetime License**
- **Turn-by-Turn Navigation**
- **Voice Instructions**
- **Spoken-Street-Names (TTS)**
- **Speed Limit Warnings**
- **Sharp Curve Warnings**
- **Dynamic Lane Assistant**
- **Junction View**
- **Travelbook**

You can purchase **add-on features** as in-app purchases:

- **Live Traffic service** to avoid delays in your daily commute
- **Head Up Display (HUD)** projects GPS navigation onto your windshield

Searching and Entering a Destination

This section contains a detailed insight into the **primary functionality** of Sygic GPS Navigation. The following articles will explain how to create, manage and save routes. Let's return to the Map overview screen and try pressing the screen once. Notice the change of the bottom-side menu when pressing the screen – Either the actual **time** and your **current speed** will be displayed along without a **Menu** Button, or the **Search** button, **Favorites button** and a **Menu** button.

Topic overview:

- Map Tap Navigating
- The Search Bar
- How To Add Favorites
- How To Save Routes
- Basic Route Overview
- How to set up a Home address

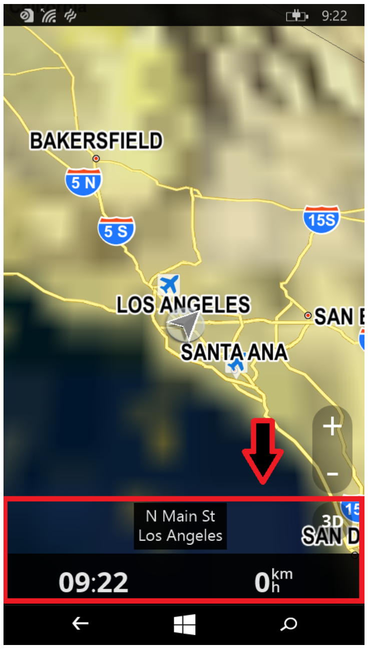
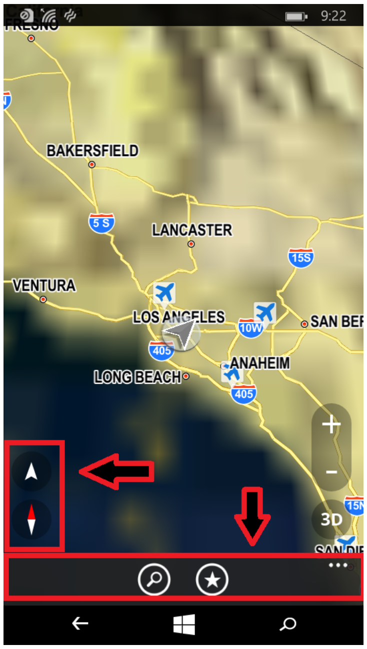
Map-tap Navigating

The basic way to enter your destination is **Map-tap Navigating**. It allows you to select your destination by **selecting a point from the map** in map browsing mode without needing to type an address. Although not as many options are available by entering your destination like this, it is still an effective way to navigate. Notice the difference between **Map Browsing** mode and **Navigating** mode depicted in the screenshots below – **Map Browsing** mode is activated by pressing and scrolling the screen and allows you to **browse freely** in the map, displays the **compass**, **Search**, **favorites** and **Menu** options as well as an option to return to **Navigating** mode (icon directly above the compass). Navigating mode **locks on** to your current or last known position, the current street name will be displayed as well. notice the **disappearing of the left-hand side options** (compass, switch to navigating mode). The **Search**, **Favorites** and **Menu** options are now hidden and will be shown once you **press the screen once**.

Navigating mode	Map Browsing mode
	




Enter **map browsing mode** and select the point in the map you wish to navigate to. Additional information about the selected point will appear in a **bubble** and will contain the **Address** of the point and an **approximate distance** from your current position. If you tap the bubble, the **POI Details** will appear. From here you have two options:

1) Navigate to the selected point from the map (Press **Get Directions** in the POI Details screen)

Map Browsing mode	Select a point on the map	POI Details

Nearby POI About

TSR	20m
Wendy's	20m
Quiznos	39m
College of English Language	43m
Spreckels Theatre	48m
Rhoads & West	60m
John T Burke Attorney At Law	60m

Notice that the Nearby POI option allows you to filter the POIs not only using search, but also in groups. Selecting a POI will show in on the map first and you need to enter the POI details again to actually navigate to it. Once you select the Get directions option, a route will be calculated and you will enter the **Basic Route overview** window.

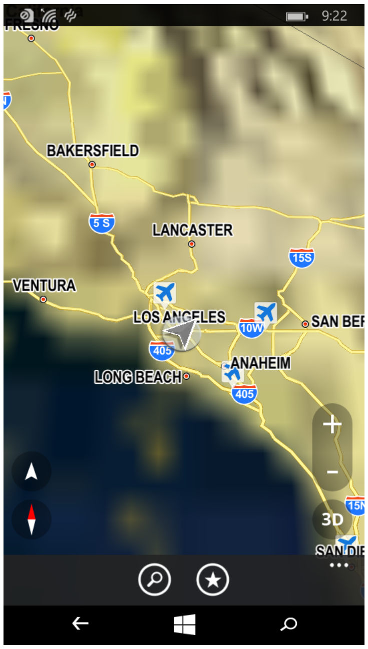
Map-tap navigating also allows you to add a Pass-by or via-point from the map while a route is already established. You need to enter **Map Browsing** mode when a route is created, then add the point:

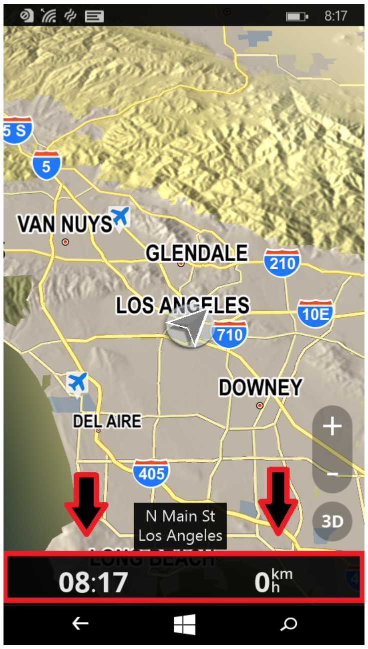
- **Pass-by** points are available if you select an **area**, like a city, district, etc.
- **Via-Points** can be added as **specific POIs** or **addresses**.

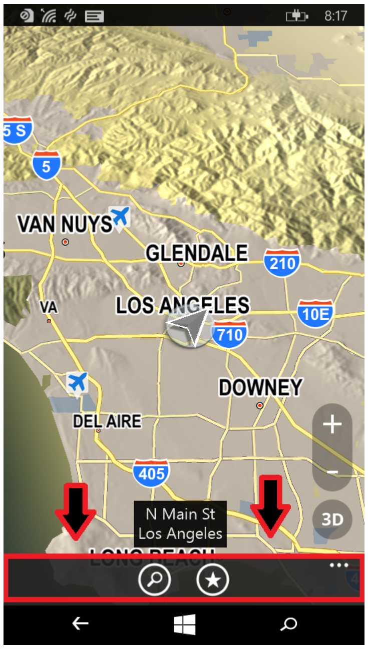
Once you add a **Pass-by** or **Via-point**, the route will be **recomputed**.

The Search Bar

The **Search Bar** serves to find your destination in a number of ways. Most of your input when creating a route goes through here. To actually enter the **Search bar**, you need to tap the **Search** icon from the bottom of the screen. The icon is available in **Map Browsing** mode, or you need to press the screen once when in **Navigating mode**.

Map Browsing mode	Navigating mode	Additional options in Navigating mode
		






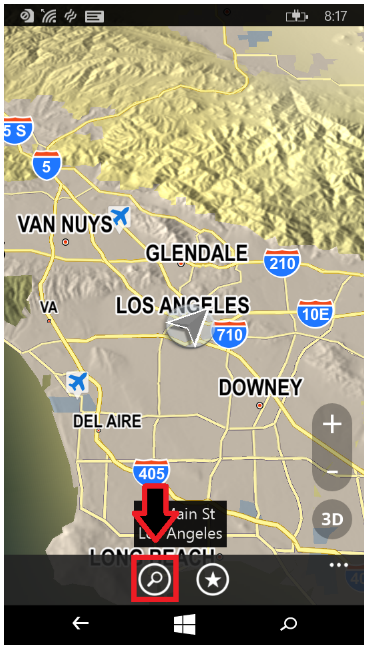
A number of new fields will appear – The search field itself with your current country predefined, a number of suggestions with Nearby POIs listed on top, an “X” at the end of the line and a “+” Icon. Each of these represent an option you can use to put in your destination.

- Entering Your Destination
- Entering Waypoints
- Entering GPS Coordinates
- Navigating To POIs

Entering your destination

You can enter your destination using a combined system of your **input** and **suggestions** given by Sygic based on the information given and available. Notice that once you start typing your destination, Sygic will give you a number of **suggestions**. Fill in your destination by intuitively entering a **few letters** and then choosing from the **suggestions** to save time and **decrease** the amount of **touches** you would usually spend by entering a full address.

Search button



Once your input of your destination address is complete, simply tap the **play button** in the **bottom-side panel** of the screen. Once you press this button, a route will be calculated and you will enter the **Basic Route overview** window. You can also discard your input by pressing the “**x**” icon in the bottom-side panel of the screen, so be careful!

Below is a simple example. The option to start navigating will be able to calculate a route from the point you **select a city**. Sygic will then select the **city center** as the **default destination**. If you select a street that has defined house numbers, it will navigate you to either the **beginning** or **end** of the street.

Select search	Enter first few letters	Select destination from the list

Entering waypoints

Once you enter your destination, you might want to add waypoints you wish to stop by on the road:

1. Enter the **Search field**
2. tap the **“+”** icon at the end of the search bar. Notice that **another line will appear** above and the list will change.
3. You can now enter either a **waypoint**, enter your **destination** or change your **current position**. You can add a large number of waypoints this way.

To remove a waypoint, all you need to do is tap the “**x**” icon at the end of the line (as opposite to the **“+”** icon next to the line with your destination address).

Once you are finished entering your waypoints, simply tap the **play** button in the bottom-side panel of the screen – a route will be calculated and you will enter the Basic Route overview window. You can also discard your input by pressing the “**x**” icon in the bottom-side panel of the screen, so be careful!

Navigating to GPS Coordinates

Your first step before entering **GPS coordinates** in the search bar will lead to the **clearing** of the pre-defined country. Tap the “**x**” icon at the end of the line to do this. Once done, please enter your GPS coordinates. You can enter them in one of the **supported formats**:

- **Degrees** – 0.0
- **Minutes** – 0.0’0
- **Seconds** – 0.0’0”

Please note that your preferred formats from the list above need to be set in **Menu > Settings > Regional > GPS Coordinates**. Once you start entering the longitude coordinate, Sygic will start giving suggestions for your destination. These will of course not be coordinate suggestions, but actual addresses.

Menu	Select Settings	General	Regional
	 Search Favorites My Account Settings Sygic Store Head Up display	 Settings Scroll here to show other options General Map GPS Module On Manage maps Reset to defaults	 Settings Regional Display Voice: TTS English US (Microsoft Zira Mobile) Language: English (American) Distance units: Kilometers Time format: 14:00 Temperature: Temperature in °C GPS coordinates: Degrees (0.0°)

To enter **South latitude** and **West longitude** coordinates, you need to either enter the **S** and **W** letters before the actual coordinates separated by a space, or by entering the **negative (-)** sign at the start of the coordinate.You can also **copy and paste** the coordinates from external sources directly into the **search bar**.

Select search	Clear the search field	Search field must be clear	Suggestions will start appearing

Once your input of your destination coordinates is complete, simply tap the **play button** in the **bottom-side panel** of the screen. Once you press this button, a route will be calculated and you will enter the Basic Route overview window. You can also discard your input by pressing the “**x**” icon in the bottom-side panel of the screen, so be careful!

Navigating to POIs

There is more than one way to actually enter a POI as a destination:

1. If you are not looking for an address, but for **accommodation**, **vehicle services**, **petrol stations** or other **Points of Interest**, select the **nearby POI** option from the search bar right away.

- Notice that a list of POIs will be displayed with their actual **distances** from your **current position**. Now this is a lot of POIs, so to filter them, simply tap the **search icon** from the bottom-side of the screen (be careful not to press the system search button).
- POIs will be **filtered by your input** into the search field to narrow down to the POI you are looking for.

How to add Favorites

Saving favorites saves time while traveling in your daily commute and it is also very easy. Favorites can be added just like any other destination:

1. Select a **point on the map**, or search for an **address** via search
2. Enter **POI detail**
3. Press **Star** icon
4. Enter **name** of the Favorite
5. Confirm. **Icon will change** if successful.

- Navigating To Recent Destinations

Navigating to Favorites

By entering the **Favorites section**, you can easily navigate to either places you consider your favorite, or to places you visit more **frequently**, or places you have **visited in the past**. To actually utilize this functionality, you need to add these favorites first or travel to a few places, so that **both your history and favorites list has entries**. Adding favorites was described in the previous article.

You can create a route to a favorite in these simple steps:
1. Enter the **favorites section**
2. Select your **favorite**
3. Press to enter **POI details**
4. Select **Get directions**

When your input of your **favorites** is complete, simply press the **play** button in the bottom-side panel of the screen. Once you press this button, a route will be calculated and you will enter the **Basic Route overview** window. You can also discard your input by pressing the “**x**” icon in the bottom-side panel of the screen, so be careful!

Please note that in case you are adding favorites as Waypoints by Map-taping, you will not be offered the basic route overview window – a new route will be recomputed and set as your route right away.

Navigating to recent destinations

Once you start using the app and travel to more and more **destinations**, the app will store these destinations into the **History** section of the **Favorites** list. Once there, you can recall these destinations anytime by going to the Favorites > History. These are stored once you create a route and press the Navigate button.

To Navigate to a recent destination:

1. Enter the **favorites section**
2. Press **History** or swipe the screen to enter this section
3. Select a **recent destination**
4. Press to enter **POI details**
5. Select **Get directions**

Step 1	Step 2	Step 3	Step 4
	 Scroll to display history Favorites History Little Tokyo, California	 History Favorites Omar St 332/333 Los Angeles San Diego, California Pico House 10th Ave 113/112 San Diegc 1st Ave 1000/989 San Dieg Pala, California Wildomar, California Murrieta, California	 N Main St 501/500 Los Angeles 581m

When your input of your **Recent destination** is complete, simply press the **play** button in the bottom-side panel of the screen. Once you press this button, a route will be calculated and you will enter the **Basic Route overview** window. You can also discard your input by pressing the "**x**" icon in the bottom-side panel of the screen, so be careful!

How to save Routes

As well as single Points on the map, POIs or other map features, **Routes can be saved** as well, further increasing the comfort of your day-to-day commute.

To **save a route**, create a route first and before confirming it by pressing the Navigate button, follow these steps:

1. Go to **Route overview**
2. Tap the **Star** icon
3. **Enter a name** for the route
4. **Confirm**

How to set up a Home address

You can set up your **Home** address as a regular **favorite**. They are very similar:

1. Both are stored in the **Favorites** section
2. Both are added by pressing an **icon** in the **POI Details** screen – How to add favorites is described **here**
3. It can be removed like any other favorite – How to remove Favorites is described **here**
4. You can navigate to your **Home** address like to any other saved **favorite**

Press icon in POI Details	To remove, press this icon
 18:45 Cleveland St 754/755 Los Angeles About Nearby POI Cleveland St 754/755 Los Angeles California N 34.06318° W 118.24173° 1.1km Get directions	 18:45 Cleveland St 754/755 Los Angeles About Nearby POI Cleveland St 754/755 Los Angeles California N 34.06318° W 118.24173° 1.1km Get directions

However, once created, the **Home** address can be recognized from other **Favorites** and **saved routes**:

1. It has a **unique icon**
2. You can save only one **Home** address at a time
3. You can't change the name of the Home address

Additional options

This section is dedicated to the more **advanced settings** that provide more **detailed information** and **insight** into the app and some of the more **advanced functions**. It is still **subject to change** as we will bring more functions.

- Advanced Route Overview
- Avoiding Parts of the Route
- Demonstration Mode

Advanced Route Overview

The **Advanced route overview** section can be accessed in two ways:

1. From the **basic route overview** screen
a) Select a destination and let the app compute a route
b) Once in basic route overview, press the **Route summary** button

Basic overview	Advanced Route Overview
 1st of 1 Routes 192km 21:00 1h 45m with no traffic 19:14 VICTORVILLE LOS ANGELES RIVERSIDE ANAHEIM CORONA LONG BEACH IRVINE MURRIETA CARLSBAD SAN DIEGO 405 10E 15N 15S B California Motorways Toll roads Ferries Unpaved roads	 Scroll to display additional options Route Route overvie ns Start: N Main St 201/212 Los Angeles End: 1st Ave 1000/989 San Diego ETA 21:00 (1h 45m) DISTANCE 192km No incidents on route California Motorways Toll roads Ferries Unpaved roads

2. Whenever **after** you press the navigate button, until you reach your destination or cancel your route.
a) **Press** on the screen once
b) press the **Route summary** button

Avoiding parts of the route

On some occasions, you may need to **avoid** a certain **point** of the route. Ranging from **single route points**, up to **road types** for entire **countries**, Sygic can help you reach your destination as quickly and comfortably as possible. These are the **options** to avoid certain parts of your route:

1) Avoiding **Toll Roads, Highways, Ferries, Unpaved Roads** from the **Basic** and **Advanced route overview**:

- You can select to avoid either of the above if considered in your route by pressing the icon it represents
- You can select whether to avoid the roads above for each country separately

Troubleshooting

Dear customer,

if you are experiencing issues while using **Sygic GPS Navigation**, this category will provide you with basic troubleshooting steps.

If you would not find proper solution in this **User Guide**, please contact our **Customer support**. Please provide our support team with as much detailed information about the issue and, if possible, provide us with a screenshot of the **About** section in Sygic Settings.

To take a **screenshot** on your **Windows Phone device**, all you need to do is press and hold the **Volume-Up** and **Power** buttons at the same time.until it flashes. The **screenshot** will be stored in your **gallery**, if using a browser, then the Screenshots are stored in **Storage** (internal or external SD Card)/*Pictures*/*Screenshots*.

Crashing, freezing, not starting at all

If Sygic exits without an apparent reason, freezes while performing an operation or doesn't start at all, then you might want to check if you don't have many additional apps running. Sygic relies heavily on your device's hardware and memory.

If your device's hardware is OK, then please **restart your device**. If that doesn't help, then you might want to consider **Resetting to defaults**. As a **last resort**, **reinstall Sygic**:

1. **Find** it in the list of apps
2. **Press and hold** Sygic to display the additional options
3. Press **remove** to uninstall Sygic from your device.
4. **Install Sygic** back from Store and try again

If you still experience the issue, please **Submit feedback** from our app (if possible), or contact our **Support Team** in case you can't run the app at all.

Connection issues

To access certain sections of Sygic, you need to have an **active internet connection**. If you receive an **error message** while trying to enter these Sections (Signing in, downloading maps, entering Sygic Store or downloading voices), **check your current connection**, if you don't have a **firewall, antivirus or other app** blocking Sygic's access to the internet.

If you still aren't able to access the internet, then try using a different connection (other WiFi, 3G). If you can't connect to the internet in Sygic only, then you need to **Reset to defaults**.

If you still experience the issue, please **Submit feedback** from our app (if possible), or contact our **Support Team** in case you can't run the app at all.

Route calculation errors

These are **two most common routing errors** you might encounter while using **Sygic GPS Navigation**.

1) **Download Missing Map** error:

- This error usually occurs when you are creating a **route** between **multiple countries** and are missing crucial maps of countries that need to be **passed through** (for example, if you create a route from Spain to Germany, but are missing the map of France, or from California to Washington without the maps of Oregon or Idaho).
- To avoid this error, make sure that **all maps necessary for the route are installed**. If you don't have it installed, simply zoom in the map above the missing state until you see the option to download it.
- If you are **pre-planing your route overseas**, make sure to **change** your **current position** when creating the route, so that the route isn't calculated from your current position.

2) **Route Calculation Has Failed, Roads Limit Reached**:

- **The route is too long**. If you would try to calculate a route from, for example, Lisbon to Moscow, the limit would be exceeded before the route would be calculated and you will receive this error message
- **The route is long whit a specific settings**. The route would be normally calculated, but because of the specific settings, as for example highway avoidance, the route possibilities would be exceeded before the route would be calculated.
- **You will set starting of finishing point in a no-drive zone**. In this case, the application would try to calculate the route which cannot be calculated and will go on with the calculation until the limit would be reached.
- **If none** of the descriptions above match your case, please **contact our support** team.

If you still experience the issue, please **Submit feedback** from our app , or contact our Customer support directly in case you need more support or encounter an error not listed in this section.

Create an account to boost your Sygic with special features

Your own **Sygic account** is the best (though not the only) way to sign in and use your purchased features. It is also used once you complete an in-app purchase, binding the **purchased product** to your **account** and enable you to carry it over to a new device, once you replace your previous one. It is also good to have a **registered** Sygic account, so that you are informed about new **special offers, newsletters** and more.

While **not a mandatory requirement** to use Sygic GPS Navigation for your Windows Phone device, it is the best way to keep informed about news and special offers for our products and we strongly recommend users to have one.

Topic overview:

- Traffic Information

The **Head up Display** works in Trial and Premium mode, giving you **Turn-by-Turn instructions, Speed Camera Warnings** and displays **Speed limits**. In Free mode, none of these will be displayed, as these functions are bound to the **Sygic Lifetime Navigation**

Lifetime Navigation

Users who purchase **Sygic Lifetime Navigation** have full access to all premium functions of Sygic. We've already mentioned which features are paid and which are for free. Sygic GPS Navigation is a **free application** that offers **in-app purchases**.

The following features are available **At no cost**:

- Offline Maps
- Free Map Updates
- Route Planning
- Alternative Routes
- 3D Buildings & Landscape
- Multiple Waypoints
- Millions of POI
- Offline Search

These features are available during the **7-day Trial Period** and **Premium** users after the trial period expires:

- **Guaranteed Map Updates**
- **Lifetime License**
- **Turn-by-Turn Navigation**
- **Voice Instructions**
- **Spoken-Street-Names (TTS)**
- **Speed Limit Warnings**
- **Sharp Curve Warnings**
- **Dynamic Lane Assistant**
- **Junction View**
- **Travelbook**

These **add-on features**, available as in-app purchases, are also affected by Lifetime Navigation and therefore will work in restricted free modes as well if you don't have an active Lifetime Navigation:

- **Live Traffic service**
- **Head Up Display (HUD)**

Featured Articles

- How To Buy Lifetime Navigation
- How To Activate Lifetime Navigation

How to buy Lifetime Navigation

Lifetime Navigation for Windows Phone can be purchased **only** as an **in-app purchase** in the free **Sygic GPS Navigation** for Windows Phone app. The process is very simple:

1. Go to **Menu**
2. Select **Sygic Store**
3. Press **Get Lifetime Navigation**
4. Select a **package** you wish to purchase
5. Check the **product description** page and then press the **price** button to proceed with the purchase
6. **Confirm** the purchase.

Step 1	Step 2	Step 3	Step 4

Once you complete the purchase, the licence will be activated in your account and you will receive a **proof of purchase** from Microsoft about the successful transaction. Please retain it for your record and provide it in case our **Support Staff** requires it, as it validates both your identity and confirms that you purchased **Lifetime Navigation**.

How to activate Lifetime Navigation

The **Lifetime Navigation** is usually bound to the e-mail address you have used during purchase – your Sygic account. The product is **activated upon purchasing**, so you are not required to perform any additional actions to activate your purchase, though you might need to restore your purchase in case you are transferring from one device to another.

To **Restore** your purchased Lifetime Navigation:

1. Sign in
2. Go to Menu
3. Select Sygic Store
4. Select **Restore** – note that you will sometimes need to scroll to the right to see this option.

In some cases, Step 1 will suffice to restore your purchase, though you will need to follow through the whole process if not.
